Analyst Note: Application Focus: To compare and contrast BioSep4000 and a leading competitor large range GFC column (TSKgel SWxl 4000)

Using a standard mixture of high molecular weight proteins optimized for the 4000 series separation, the BioSep 4000 and a leading competitor column (TSKgel SWxl 4000) were compared using standard conditions (100 mM phosphate pH 6.8, 1 mL/min). Similar amounts of the standard were injected onto each column. When comparing peak resolutions between columns certain observations can be made regarding the performance of the two columns. A better resolution between most components in the mixture is observed for the BioSep 4000 column versus the competitor design, leaving a smaller
